Tooling Validation Report - New Injection Mold

Manufacturing Knowledge Hub | Process Engineering

Owner: Carlos Ibarra | Last updated: October 30, 2026

Validation results for the newly commissioned injection mold tool, covering first article inspection and short-run capability.

Key Points

- First article inspection passed all 14 critical dimensions within tolerance.
- Short-run capability study produced a Cpk of 1.48 on the primary wall thickness dimension.
- Mold flow simulation matched actual fill pattern within acceptable variance.
- Tool is approved for production release pending preventive maintenance plan sign-off.
