Freight Cost Analysis - Q2

Manufacturing Knowledge Hub | Supply Chain and Logistics

Owner: Omar Haddad | Last updated: October 30, 2026

Analysis of inbound and outbound freight spend by lane and carrier, identifying cost reduction opportunities for the upcoming quarter.

Key Points

- Expedited freight accounted for a disproportionate share of total freight spend.
- Consolidating two weekly less-than-truckload shipments into one reduced cost per unit.
- A regional carrier renegotiation is projected to reduce lane costs by roughly 7%.
- Recommendations are being reviewed with finance before the next carrier contract renewal.
